

## ABSTRACT OF THE DISCLOSURE

There is provided a form processing method enabling overlaying of field data without processing the field data, in form processing for overlaying field data onto a field in a form. In particular, the form processing method includes a step of setting an input picture for each of the fields as field attribute information, the input picture being composed of characters indicating a format of field data to be overlaid. In the method, picture words are cut (step S305) based on the input picture and field data words are cut (step S306), and the field data is overlaid onto a field (step S312).
